4 June 1986

NOTE FOR: Bernie

FROM: Ed

Recently you and I discussed my conversation with Hank Mahoney whereby OIT would get involved with the Office of Logistics in renovation projects at the design level. This is a change from the present policy whereby OIT only begins to plan for telephone and terminal additions, moves and deletes subsequent to the completion of all design and cost estimate activity. Where are we with respect to implementation, and association with OL that would permit us to include our cost estimates at the time the overall renovation estimate is being provided to the requester.

Ed Maloney

STAT

STAT

has had a discussion with

They agree to call us at their '1/3 design' point to include our data in their costing. Additionally they will share their project lists with us and we will cross reference their numbers in our data base. I have asked Frank to prepare a memo (from me to [redacted]) documenting the agreements. I have spoken with [redacted]. He is concerned that the two offices may not be working to the same priorities. I assured him

(over)

that we will surface quickly any disagreements so that they
can be reconciled at the office level of OIT and OL.

STAT  Frank has attempted (not successful yet) contact with
for RECD projects. A similar path will be
taken.
